KEY:

- █ Resistant (very well suitable for the chemical substance).
- █ Resistant within limits (suitable for the application in question only when carefully monitored).
- █ Not resistant (use not advisable).

IMPORTANT: The above notes are based on experience and laboratory tests. However, the actual suitability of a glove depends on the individual conditions of its use and must be confirmed by an appropriate test under operational conditions.

ATTENTION: The gloves we supply conform to the respective current technical requirements and standards. Given the variety of materials used, the possibility of incompatibility or usage problems for the wearer cannot be excluded in individual cases. In such cases, we would be happy to advise you about optimum solutions.
